

Design Technology at WPS

At Woolton Primary School, Design Technology is taught through Projects on a Page (PoP) which is an engaging and fun filled scheme of work used by teachers in Key Stages 1 and 2. Our children learn and develop a wide variety of skills, knowledge and understanding through different projects designed to enhance their previous learning and enable our children to learn key skills.

At Woolton Primary School our projects are taught through DT curriculum weeks and during these weeks children will make cross curricula links with other subjects.

Our Design Technology learning journey starts in EYFS, where children will learn and develop key skills, confidence and independence through teacher led activities and continuous provision.
